Datafax ZX Spectrum Disc Interface

- * The Interface randomly accesses programmes and data arrays on the disc drive as opposed to the sequential accessing of files on cassette or microdrive. The difference is equivalent to finding your favourite track on a long playing record or a music cassette. Loading of your largest games is done in a fraction of the time you are used to.
- * You can load-run programmes without forever searching through, stopping and starting the cassette - the interface stops and starts the drive, finding the exact area on the where the programme has been saved AUTOMATICALLY.
- * It will load Sinclair BASIC, Z80 machine code programmes with automatic load-run if specified when saving the programme.
- * It can save up to 78 files per 3" diskette - 39 per side! Total storage capacity is 200kBytes per disc. The Interface can use standard 5.25" drives as it is fully Shugart Bus compatible.
- * The Interface can load full 48K programmes from diskette using clear instructions laid out in the user manual. Formatting and backup routines are all in the interface on booting up so that loss of the Utility diskette does not mean the end of the usefulness of the system.
- * The Utility diskette supplied to help you get started on the Interface with instructions of syntax for each command. Also there are 15 full colour games and an example database on each diskette - FREE!
- * A comprehensive manual is also supplied giving demonstration programmes of each command, with a number of extra programme listings showing how the range of Interface commands can be used to create a powerful computing environment. The manual is friendly and easy to read such that users have been able to do advanced operations within minutes of setting up, but advanced for those requiring more detailed information on it's operations.
- * The Interface commands have now been extended to include advanced features such as Error trapping, forced run of non-autorun programmes and audio feedback of completion of Interface command task. All the Interface commands are readily accessible and easy to use in all BASIC or machine code programmes. The commands are easy to remember (eg BL=Basic load) and do not interfere with Microdrive commands.
- * The Interface is supplied with an extra edge connector for other ZX Spectrum peripherals as well as a system reset button to save having to pull the mains plug out to get out of a jammed programme!!
